

# Improving your Zoom Experience

## **Use the best internet connection you can.**

In general:

Wired connections are better than wireless (WiFi or cellular) connections.

WiFi connections are better than cellular (3G/4G/LTE) connections.

Plan ahead for Zoom meetings, and as often as possible, join Zoom meetings from a location where you can use a fast, reliable, wired internet connection.

## **Mute your microphone when you're not speaking.**

When your microphone is on, Zoom will devote part of your internet connection to an audio stream for you, even if you are not speaking. Mute your microphone when you do not need it, and you will allow Zoom to use your Internet connection more effectively.

## **Stop your webcam video when you don't need it.**

If your instructor or moderator is okay with you doing so, start your video only when you need to show yourself on webcam, and stop your video when it isn't needed.

## **Disable HD webcam video.**

Sending high definition (HD) webcam video requires more bandwidth than sending non-HD. Disabling HD video will free up more of your internet connection for other parts of your Zoom meeting. From within the Zoom Client:

1. Click the "Home" tab
2. Click "⚙️ Settings"
3. In the Settings window that opens:
  - a. Click the "Video" tab
  - b. Uncheck "Enable HD"
4. Close the Settings window.

## **Use speaker view over gallery view if possible.**

## **Don't use full screen mode if possible.**

## **Avoid other activities that will steal bandwidth.**

Don't start other bandwidth-intensive activities just before, or during, a Zoom meeting. On your Zoom device—and as much as possible, on other computers and devices that share your internet connection—avoid:

- large downloads
- large uploads
- streaming video (e.g. Netflix, Hulu, YouTube)
- cloud backups (e.g. Carbonite, CrashPlan)
- cloud file synchronizations (e.g. OneDrive, Dropbox)
- other high-bandwidth activities
